## **Confidentiality Status**

This document is Non-Confidential. The right to use, copy and disclose this document may be subject to license restrictions in accordance with the terms of the agreement entered into by Arm and the party that Arm delivered this document to.

Unrestricted Access is an Arm internal classification.

#### **Product Status**

The information in this document is Final, that is for a developed product.

#### **Feedback**

Arm welcomes feedback on this product and its documentation. To provide feedback on the product, create a ticket on https://support.developer.arm.com.

To provide feedback on the document, fill the following survey: https://developer.arm.com/documentation-feedback-survey.

## Inclusive language commitment

Arm values inclusive communities. Arm recognizes that we and our industry have used language that can be offensive. Arm strives to lead the industry and create change.

This document includes language that can be offensive. We will replace this language in a future issue of this document.

To report offensive language in this document, email terms@arm.com.

## 1. Introduction

### 1.1 Product revision status

The  $r_x p_y$  identifier indicates the revision status of the product described in this manual, for example,  $r_1 p_2$ , where:

rx Identifies the major revision of the product, for example, r1.

**py** Identifies the minor revision or modification status of the product, for

example, p2.

## 1.2 Intended audience

This manual is for system designers, system integrators, and programmers who are designing or programming a *System-on-Chip* (SoC) that uses the Cortex®-A715 core with the optional Cryptographic Extension.

## 1.3 Conventions

The following subsections describe conventions used in Arm documents.

#### Glossary

The Arm® Glossary is a list of terms used in Arm documentation, together with definitions for those terms. The Arm Glossary does not contain terms that are industry standard unless the Arm meaning differs from the generally accepted meaning.

See the Arm Glossary for more information: developer.arm.com/glossary.

Convention	Use
italic	Citations.
bold	Terms in descriptive lists, where appropriate.
monospace	Text that you can enter at the keyboard, such as commands, file and program names, and source code.
monospace <u>underline</u>	A permitted abbreviation for a command or option. You can enter the underlined text instead of the full command or option name.

Convention	Use
<and></and>	Encloses replaceable terms for assembler syntax where they appear in code or code fragments.  For example:
	MRC p15, 0, <rd>, <crn>, <opcode_2></opcode_2></crn></rd>
SMALL CAPITALS  Terms that have specific technical meanings as defined in the Arm® Glossary. For example, IMPLEMENTATION DEFINED, IMPLEMENTATION SPECIFIC, UNKNOWN, and UNPREDICTABLE.	

Recommendations. Not following these recommendations might lead to system failure or damage.

Requirements for the system. Not following these requirements might result in system failure or damage.

Requirements for the system. Not following these requirements will result in system failure or damage.

An important piece of information that needs your attention.

A useful tip that might make it easier, better or faster to perform a task.

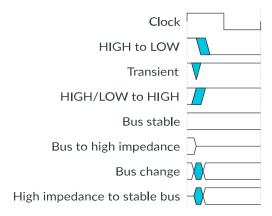

A reminder of something important that relates to the information you are reading.

#### **Timing diagrams**

The following figure explains the components used in timing diagrams. Variations, when they occur, have clear labels. You must not assume any timing information that is not explicit in the diagrams.

Shaded bus and signal areas are undefined, so the bus or signal can assume any value within the shaded area at that time. The actual level is unimportant and does not affect normal operation.

Figure 1-1: Key to timing diagram conventions

#### **Signals**

The signal conventions are:

#### Signal level

The level of an asserted signal depends on whether the signal is active-HIGH or active-LOW. Asserted means:

- HIGH for active-HIGH signals.
- LOW for active-LOW signals.

#### Lowercase n

At the start or end of a signal name, n denotes an active-LOW signal.

#### Register descriptions

#### Reset definitions

#### Replication Operator {}

Verilog replication operators are used for reset values over 8-bits.

For example, 16{0} indicated a binary value of 16 zeros.

x

Resets that are unknown are indicated with x.

## 1.4 Useful resources

This document contains information that is specific to this product. See the following resources for other useful information.

Access to Arm documents depends on their confidentiality:

- Non-Confidential documents are available at developer.arm.com/documentation. Each document link in the following tables goes to the online version of the document.
- Confidential documents are available to licensees only through the product package.

Arm product resources	Document ID	Confidentiality

## 2. Cryptographic extension support in the Cortex®-A715 core

The Cortex®-A715 core supports the optional Arm®v8.0-A and Arm®v8.2-A Cryptographic Extension.

The Arm®v8.0-A Cryptographic Extension adds A64 instructions to Advanced SIMD that accelerate Advanced Encryption Standard (AES) encryption and decryption. It also adds instructions to implement the Secure Hash Algorithm (SHA) functions SHA-1, SHA-224, and SHA-256.

The Arm®v8.2-A extensions, Armv8.2-A-SHA and Armv8.2-SM, add A64 instructions to accelerate SHA2-512, SHA3, SM3, and SM4.

The SVE2-AES, SVE2-SHA3, and SVE2-SM extensions add A64 instructions to accelerate SHA3, SM3, SM4, and AES encryption and decryption.

## 2.1 Disabling the Cryptographic Extension

Disabling of the Cryptographic Extension applies to all Cortex®-A715 cores in a cluster.

To disable the Cryptographic Extension, assert CRYPTODISABLE.

When CRYPTODISABLE is asserted:

- Executing a cryptographic instruction results in an **UNDEFINED** exception.
- ID AA64ISARO EL1 indicates that the Cryptographic Extension is not implemented.

#### Related information

3.1 ID\_AA64ISARO\_EL1, AArch64 Instruction Set Attribute Register 0 on page 12

## 2.2 Product revisions

The product revision increments at each release.

The following table indicates the main differences in functionality between product revisions.

#### Table 2-1: Product revisions

Revision	Notes
r0p0	First release
r1p0	SPE functionality supported
r1p1	Added support for FEAT_ECBHB, Exploitative Control using Branch History Buffer information between exception levels
r1p2	Errata fixes

Document ID: 101592\_0102\_06\_en Issue: 06 Cryptographic extension support in the Cortex®-A715 core

Changes in functionality that have an impact on the documentation also appear in 4.1 Revisions on page 16.

# 3. AArch64 instruction identification system register

This chapter describes the ID\_AA64ISARO\_EL1 register. This instruction identification register provides information about the instructions implemented in the Cortex®-A715 core in AArch64 Execution state, including the instructions provided by the Cryptographic Extension.

## 3.1 ID\_AA64ISAR0\_EL1, AArch64 Instruction Set Attribute Register 0

Provides information about the instructions implemented in AArch64 state.

For general information about the interpretation of the ID registers, see *Principles of the ID scheme* for fields in ID registers in the Arm® Architecture Reference Manual for A-profile architecture.

#### Configurations

This register is available in all configurations.

#### **Attributes**

Width

64

#### **Functional group**

Identification registers

#### Access type

See bit descriptions

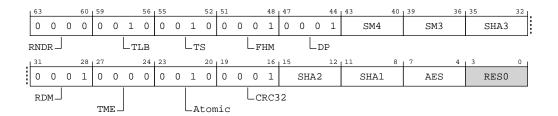

#### Reset value

Where the reset reads xxxx, see individual bits

#### Bit descriptions

### Figure 3-1: AArch64\_id\_aa64isar0\_el1 bit assignments

#### Table 3-1: ID\_AA64ISAR0\_EL1 bit descriptions

Bits	Name	Description	Reset	
[63:60]	RNDR	Indicates support for Random Number instructions in AArch64 state.  0b0000		
		Defined values are:		
		060000		
		No Random Number instructions are implemented.		
[59:56]	TLB	Indicates support for Outer Shareable and TLB range maintenance instructions. Defined values are:	060010	
		0ь0010		
		Outer Shareable and TLB range maintenance instructions are implemented.		
[55:52]	TS	Indicates support for flag manipulation instructions. Defined values are:	0b0010	
		0ь0010		
		CFINV, RMIF, SETF16, SETF8, AXFLAG, and XAFLAG instructions are implemented.		
[51:48]	FHM	Indicates support for FMLAL and FMLSL instructions. Defined values are:	0b0001	
		0ь0001		
		FMLAL and FMLSL instructions are implemented.		
[47:44]	DP	Indicates support for Dot Product instructions in AArch64 state. Defined values are:	0b0001	
		0ь0001		
		UDOT and SDOT instructions implemented.		
[43:40]	SM4	Indicates support for SM4 instructions in AArch64 state. Defined values are:	The reset values can be the	
		0ь0000	following: 0b0000,0b0001, respective to the value.	
		No SM4 instructions implemented. This value is reported when the Cryptographic Extension is not implemented or is disabled.	respective to the value.	
		0ь0001		
		SM4E and SM4EKEY instructions implemented. This value is reported when the Cryptographic Extension is implemented and enabled.		
		When the CRYPTO configuration parameter is true and the CRYPTODISABLE input is low at reset the Cryptographic Extension is implemented		

Bits	Name	Description	Reset
[39:36]	SM3	Indicates support for SM3 instructions in AArch64 state. Defined values are:	The reset values can be the
		0ь0000	following: 0b0000,0b0001, respective to the value.
		No SM3 instructions implemented. This value is reported when the Cryptographic Extension is not implemented or is disabled.	respective to the value.
		0ь0001	
		SM3SS1, SM3TT1A, SM3TT1B, SM3TT2A, SM3TT2B, SM3PARTW1, and SM3PARTW2 instructions implemented. This value is reported when the Cryptographic Extension is implemented and enabled.	
		When the CRYPTO configuration parameter is true and the CRYPTODISABLE input is low at reset the Cryptographic Extension is implemented	
[35:32]	SHA3	Indicates support for SHA3 instructions in AArch64 state. Defined values are:	The reset values can be the
		0ь0000	following: 0b0000,0b0001, respective to the value.
		No SHA3 instructions implemented. This value is reported when the Cryptographic Extension is not implemented or is disabled.	respective to the value.
		0ь0001	
		EOR3, RAX1, XAR, and BCAX instructions implemented. This value is reported when the Cryptographic Extension is implemented and enabled.	
		When the CRYPTO configuration parameter is true and the CRYPTODISABLE input is low at reset the Cryptographic Extension is implemented	
[31:28]	RDM	Indicates support for SQRDMLAH and SQRDMLSH instructions in AArch64 state.  Defined values are:	0b0001
		0ь0001	
		SQRDMLAH and SQRDMLSH instructions implemented.	
[27:24]	TME	Indicates support for TME instructions. Defined values are:	0b0000
		0ь0000	
		TME instructions are not implemented.	
[23:20]	Atomic	Indicates support for Atomic instructions in AArch64 state. Defined values are:	0b0010
		0ь0010	
		LDADD, LDCLR, LDEOR, LDSET, LDSMAX, LDSMIN, LDUMAX, LDUMIN, CAS, CASP, and SWP instructions implemented.	
[19:16]	CRC32	Indicates support for CRC32 instructions in AArch64 state. Defined values are:	0b0001
		0b0001	
		CRC32B, CRC32H, CRC32W, CRC32X, CRC32CB, CRC32CH, CRC32CW, and CRC32CX instructions implemented.	
[15:12]	SHA2	Indicates support for SHA2 instructions in AArch64 state. Defined values are:	The reset values can be the
		0ь0000  No SHA2 instructions implemented. This value is reported when the	following: 0b0000,0b0010, respective to the value.
		Cryptographic Extension is not implemented or is disabled.	
		060010	
		SHA256H, SHA256H2, SHA256SU0, SHA256SU1, SHA512H, SHA512H2, SHA512SU0, and SHA512SU1 instructions implemented. This value is reported when the Cryptographic Extension is implemented and enabled.	
		When the CRYPTO configuration parameter is true and the CRYPTODISABLE input is low at reset the Cryptographic Extension is implemented	

Bits	Name	Description	Reset
[11:8]	SHA1	Indicates support for SHA1 instructions in AArch64 state. Defined values are: <b>0b0000</b> No SHA1 instructions implemented. This value is reported when the Cryptographic Extension is not implemented or is disabled. <b>0b0001</b> SHA1C, SHA1P, SHA1M, SHA1H, SHA1SUO, and SHA1SU1 instructions implemented. This value is reported when the Cryptographic Extension is implemented and enabled.  When the CRYPTO configuration parameter is true and the CRYPTODISABLE input is low at reset the Cryptographic Extension is implemented	The reset values can be the following: 0b0000,0b0001, respective to the value.
[7:4]	AES	Indicates support for AES instructions in AArch64 state. Defined values are:  Ob0000  No AES instructions implemented. This value is reported when the Cryptographic Extension is not implemented or is disabled.  Ob0010  AESE, AESD, AESMC, and AESIMC instructions are implemented plus PMULL/PMULL2 instructions operating on 64-bit data quantities. This value is reported when the Cryptographic Extension is implemented and enabled.  When the CRYPTO configuration parameter is true and the CRYPTODISABLE input is low at reset the Cryptographic Extension is implemented	The reset values can be the following: 0b0000,0b0010, respective to the value.
[3:0]	RES0	Reserved	RESO

## 4. Document revisions

This appendix records the changes between released issues of this document.

## 4.1 Revisions

Changes between released issues of this book are summarized in tables.

The first table is for the first release. Then, each table compares the new issue of the book with the last released issue of the book. Release numbers match the revision history in Release Information on page 2.

#### Table 4-1: Issue 0000-01

Change	Location
First Confidential beta release for r0p0	-

#### Table 4-2: Differences between issue 0000-01 and issue 0000-02

Change	Location
First Confidential limited access release for r0p0	-
Updated the pdf style including wider tables, notes presentation, tables numbering, figures numbering	Throughout document
ID_AA64ISAR0_EL1 bits [3:0] reset value set to 0b0000 instead of 0b0	3.1 ID_AA64ISAR0_EL1, AArch64 Instruction Set Attribute Register 0 on page 12

#### Table 4-3: Differences between issue 0000-02 and issue 0100-03

Change	Location
First Confidential early access release for r1p0	-
Added Arm® Architecture Reference Manual Supplement Armv9, for Armv9-A architecture profile	Additional reading
Reset values set to x	3.1 ID_AA64ISAR0_EL1, AArch64 Instruction Set Attribute Register 0 on page 12

#### Table 4-4: Differences between issue 0100-03 and issue 0101-04
